Technical Information
Proline Promass A 100

Coriolis flowmeter

The single-tube flowmeter for smallest flow quantities with an ultra-compact transmitter

Application

- Measuring principle operates independently of physical fluid properties such as viscosity or density
- Accurate measurement of smallest quantities of liquids and gases for continuous process control

Device properties
- Nominal diameter: DN 1 to 4 ($\frac{1}{24}$ to $\frac{1}{8}$")
- Process pressure up to 400 bar (5 800 psi)
- Medium temperature up to +205 °C (+401 °F)
- Robust, ultra-compact transmitter housing
- Highest degree of protection: IP69K
- Local display available

Your benefits

- Highest process safety – self-drainable measuring tube design
- Fewer process measuring points – multivariable measurement (flow, density, temperature)
- Space-saving installation – no inlet/outlet run needs
- Space-saving transmitter – full functionality on smallest footprint
- Time-saving local operation without additional software and hardware – integrated web server
- Integrated verification – Heartbeat Technology™

Function and system design

Measuring principle

The measuring principle is based on the controlled generation of Coriolis forces. These forces are always present in a system when both translational and rotational movements are superimposed.

$$F_c = 2 \cdot \Delta m \, (v \cdot \omega)$$

F_c = Coriolis force

Δm = moving mass

ω = rotational velocity

v = radial velocity in rotating or oscillating system

The amplitude of the Coriolis force depends on the moving mass Δm, its velocity v in the system and thus on the mass flow. Instead of a constant rotational velocity ω, the sensor uses oscillation.

In the sensor, an oscillation is produced in the measuring tube. The Coriolis forces produced at the measuring tube cause a phase shift in the tube oscillations (see illustration):
• If there is zero flow (i.e. when the fluid stands still), the oscillation measured at points A and B has the same phase (no phase difference).
• Mass flow causes deceleration of the oscillation at the inlet of the tubes (2) and acceleration at the outlet (3).
A0016772

The phase difference (A-B) increases with increasing mass flow. Electrodynamic sensors register the tube oscillations at the inlet and outlet. System balance is created by exciting an eccentrically arranged swinging mass to antiphase oscillation. The measuring principle operates independently of temperature, pressure, viscosity, conductivity and flow profile.

Density measurement
The measuring tube is continuously excited at its resonance frequency. A change in the mass and thus the density of the oscillating system (comprising measuring tube and fluid) results in a corresponding, automatic adjustment in the oscillation frequency. Resonance frequency is thus a function of medium density. The microprocessor utilizes this relationship to obtain a density signal.

Volume measurement
Together with the measured mass flow, this is used to calculate the volume flow.

Temperature measurement
The temperature of the measuring tube is determined in order to calculate the compensation factor due to temperature effects. This signal corresponds to the process temperature and is also available as an output signal.
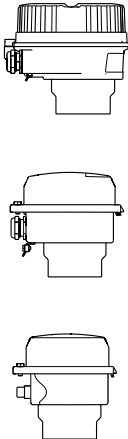

Measuring system

The device consists of a transmitter and a sensor. If a device with Modbus RS485 intrinsically safe is ordered, the Safety Barrier Promass 100 is part of the scope of supply and must be implemented to operate the device.
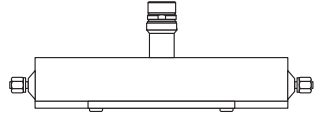

The device is available as a compact version:
The transmitter and sensor form a mechanical unit.
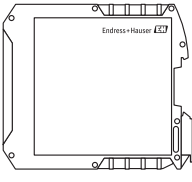

Transmitter

Promass 100	Device versions and materials:

A0016693 A0016694 A0016695	• Compact, aluminum coated: Aluminum, AlSi10Mg, coated
	• Compact, hygienic, stainless: Hygienic version, stainless steel 1.4301 (304)
	• Ultra-compact, hygienic, stainless: Hygienic version, stainless steel 1.4301 (304)
	
	Configuration:
	• Via operating tools (e.g. FieldCare)
	• Additionally for device version with local display: Via Web browser (e.g. Microsoft Internet Explorer)
	• Also for device version with 4-20 mA HART, pulse/frequency/switch output: Via Web browser (e.g. Microsoft Internet Explorer)
	• Also for device version with EtherNet/IP output:
	  – Via Web browser (e.g. Microsoft Internet Explorer)
	  – Via Add-on Profile Level 3 for automation system from Rockwell Automation
	  – Via Electronic Data Sheet (EDS)
	• Also for device version with PROFINET output:
	  – Via Web browser (e.g. Microsoft Internet Explorer)
	  – Via device master file (GSD)

Sensor

Promass A	

A0017118	• Single-tube system for high-precision measurement of minimum flow rates
	• Simultaneous measurement of flow, volume flow, density and temperature (multivariable)
	• Immune to process influences
	• Nominal diameter range: DN 1 to 4 ($\frac{1}{24}$ to $\frac{1}{8}$")
	• Materials:
	  – Sensor: stainless steel, 1.4301 (304)
	  – Measuring tube: stainless steel, 1.4539 (904L); Alloy C22, 2.4602 (UNS N06022)
	  – Process connections: stainless steel, 1.4404 (316/316L); stainless steel, 1.4539 (904L); Alloy C22, 2.4602 (UNS N06022)

Safety Barrier Promass 100

A0016763	• Dual-channel safety barrier for installation in non-hazardous locations or zone 2/div. 2:
	  – Channel 1: DC 24 V power supply
	  – Channel 2: Modbus RS485
	• In addition to current, voltage and power limitation, it offers galvanic isolation of circuits for explosion protection.
	• Easy top-hat rail mounting (DIN 35 mm) for installation in control cabinets

Equipment architecture

3   PROFIBUS DP
4   Modbus RS485
5   4-20 mA HART, pulse/frequency/switch output
6   Safety Barrier Promass 100
7   Modbus RS485 intrinsically safe
8   Non-hazardous area
9   Non-hazardous area and Zone 2/Div. 2
10   Intrinsically safe area and Zone 1/Div. 1

Safety

IT security

We only provide a warranty if the device is installed and used as described in the Operating Instructions. The device is equipped with security mechanisms to protect it against any inadvertent changes to the device settings.

IT security measures in line with operators' security standards and designed to provide additional protection for the device and device data transfer must be implemented by the operators themselves.

Input

Measured variable	**Direct measured variables**

Direct measured variables

- Mass flow
- Density
- Temperature

Calculated measured variables

- Volume flow
- Corrected volume flow
- Reference density

Measuring range

Measuring ranges for liquids

DN		Measuring range full scale values $\dot{m}_{min(F)}$ to $\dot{m}_{max(F)}$	
[mm]	[in]	[kg/h]	[lb/min]
1	$\frac{1}{24}$	0 to 20	0 to 0.735
2	$\frac{1}{12}$	0 to 100	0 to 3.675
4	$\frac{1}{8}$	0 to 450	0 to 16.54

Measuring ranges for gases

The full scale values depend on the density of the gas and can be calculated with the formula below:
$\dot{m}_{max(G)} = \dot{m}_{max(F)} \cdot \rho_G : x$

$\dot{m}_{max(G)}$	Maximum full scale value for gas [kg/h]
$\dot{m}_{max(F)}$	Maximum full scale value for liquid [kg/h]
$\dot{m}_{max(G)} < \dot{m}_{max(F)}$	$\dot{m}_{max(G)}$ can never be greater than $\dot{m}_{max(F)}$
ρ_G	Gas density in [kg/m³] at operating conditions

DN		x
[mm]	[in]	[kg/m³]
1	$\frac{1}{24}$	32
2	$\frac{1}{12}$	32
4	$\frac{1}{8}$	32

To calculate the measuring range, use the *Applicator* sizing tool →

Calculation example for gas
- Sensor: Promass A, DN 2
- Gas: Air with a density of 11.9 kg/m³ (at 20 ℃ and 10 bar)
- Measuring range (liquid): 100 kg/h
- x = 32 kg/m³ (for Promass A DN 2)

Maximum possible full scale value:
$\dot{m}_{max(G)} = \dot{m}_{max(F)} \cdot \rho_G : x = 100$ kg/h $\cdot 11.9$ kg/m³ $: 32$ kg/m³ $= 37.2$ kg/h

Recommended measuring range

"Flow limit" section →

Operable flow range	Over 1000 : 1.

Over 1000 : 1.

Flow rates above the preset full scale value are not overridden by the electronics unit, with the result that the totalizer values are registered correctly.

Input signal	**External measured values**
	To increase the accuracy of certain measured variables or to calculate the corrected volume flow for gases, the automation system can continuously write different measured values to the measuring device:

- Operating pressure to increase accuracy ecommends the use of a pressure measuring device for absolute pressure, e.g. Cerabar M or Cerabar S)
- Medium temperature to increase accuracy (e.g. iTEMP)
- Reference density for calculating the corrected volume flow for gases

+Hauser: see "Accessories" section → 🖹 89

It is recommended to read in external measured values to calculate the following measured variables:
- Mass flow
- Corrected volume flow

HART protocol

The measured values are written from the automation system to the measuring device via the HART protocol. The pressure transmitter must support the following protocol-specific functions:
- HART protocol
- Burst mode

Digital communication

The measured values can be written from the automation system to the measuring via:
- PROFIBUS DP
- Modbus RS485
- EtherNet/IP
- PROFINET

Output

Output signal	**Current output**

Current output	4-20 mA HART (active)
Maximum output values	• DC 24 V (no flow) • 22.5 mA
Load	0 to 700 Ω
Resolution	0.38 µA
Damping	Adjustable: 0.07 to 999 s
Assignable measured variables	• Mass flow • Volume flow • Corrected volume flow • Density • Reference density • Temperature ℹ The range of options increases if the measuring device has one or more application packages.

Pulse/frequency/switch output

Function	Can be set to pulse, frequency or switch output
Version	Passive, open collector
Maximum input values	• DC 30 V • 25 mA
Voltage drop	For 25 mA: ≤ DC 2 V
Pulse output	

Pulse width	Adjustable: 0.05 to 2 000 ms
Maximum pulse rate	10 000 Impulse/s
Pulse value	Adjustable
Assignable measured variables	• Mass flow • Volume flow • Corrected volume flow
Frequency output	
Output frequency	Adjustable: 0 to 10 000 Hz
Damping	Adjustable: 0 to 999 s
Pulse/pause ratio	1:1
Assignable measured variables	• Mass flow • Volume flow • Corrected volume flow • Density • Reference density • Temperature The range of options increases if the measuring device has one or more application packages.
Switch output	
Switching behavior	Binary, conductive or non-conductive
Switching delay	Adjustable: 0 to 100 s
Number of switching cycles	Unlimited

Assignable functions	• Off
	• On
	• Diagnostic behavior
	• Limit value
	  – Mass flow
	  – Volume flow
	  – Corrected volume flow
	  – Density
	  – Reference density
	  – Temperature
	  – Totalizer 1-3
	• Flow direction monitoring
	• Status
	  – Partially filled pipe detection
	  – Low flow cut off
	
	The range of options increases if the measuring device has one or more application packages.

PROFIBUS DP

Signal encoding	NRZ code
Data transfer	9.6 kBaud...12 MBaud

Modbus RS485

Physical interface	In accordance with EIA/TIA-485-A standard
Terminating resistor	• For device version used in non-hazardous areas or Zone 2/Div. 2: integrated and can be activated via DIP switches on the transmitter electronics module • For device version used in intrinsically safe areas: integrated and can be activated via DIP switches on the Safety Barrier Promass 100

EtherNet/IP

Standards	In accordance with IEEE 802.3

PROFINET

Standards	In accordance with IEEE 802.3

Signal on alarm

Depending on the interface, failure information is displayed as follows:

Current output

4-20 mA

Failure mode	Choose from: • 4 to 20 mA in accordance with NAMUR recommendation NE 43 • 4 to 20 mA in accordance with US • Min. value: 3.59 mA • Max. value: 22.5 mA • Freely definable value between: 3.59 to 22.5 mA • Actual value • Last valid value

HART

Device diagnostics	Device condition can be read out via HART Command 48

Pulse/frequency/switch output

Pulse output	
Failure mode	Choose from: • Actual value • No pulses
Frequency output	
Failure mode	Choose from: • Actual value • 0 Hz • Defined value: 0 to 12 500 Hz
Switch output	
Failure mode	Choose from: • Current status • Open • Closed

PROFIBUS DP

Status and alarm messages	Diagnostics in accordance with PROFIBUS PA Profile 3.02

Modbus RS485

Failure mode	Choose from: • NaN value instead of current value • Last valid value

EtherNet/IP

Device diagnostics	Device condition can be read out in Input Assembly

PROFINET

Device diagnostics	In accordance with "Application Layer protocol for decentral device periphery and distributed automation", version 2.3

Local display

Plain text display	With information on cause and remedial measures
Backlight	Red backlighting indicates a device error.

Status signal as per NAMUR recommendation NE 107

Operating tool

- Via digital communication:
  - HART protocol
  - PROFIBUS DP
  - Modbus RS485
  - EtherNet/IP
  - PROFINET
- Via service interface
- Via Web server

Plain text display	With information on cause and remedial measures

Additional information on remote operation → 🖺 79

Web browser

Plain text display	With information on cause and remedial measures

Light emitting diodes (LED)

Status information	Status indicated by various light emitting diodes
	The following information is displayed depending on the device version:
	• Supply voltage active
	• Data transmission active
	• Device alarm/error has occurred
	• EtherNet/IP network available
	• EtherNet/IP connection established
	• PROFINET network available
	• PROFINET connection established
	• PROFINET blinking feature

Ex connection data

These values only apply for the following device version:
Order code for "Output", option M "Modbus RS485", for use in intrinsically safe areas

Output values (from measuring device to automation system)	**Analog input 1 to 8** • Mass flow • Volume flow • Corrected volume flow • Target mass flow • Carrier mass flow • Density • Reference density • Concentration • Temperature • Carrier pipe temperature • Electronic temperature • Oscillation frequency • Oscillation amplitude • Frequency fluctuation • Oscillation damping • Tube damping fluctuation • Signal asymmetry • Exciter current **Digital input 1 to 2** • Partially filled pipe detection • Low flow cut off **Totalizer 1 to 3** • Mass flow • Volume flow • Corrected volume flow
Input values (from automation system to measuring device)	**Analog output 1 to 3 (fixed assignment)** • Pressure • Temperature • Reference density **Digital output 1 to 3 (fixed assignment)** • Digital output 1: switch positive zero return on/off • Digital output 2: perform zero point adjustment • Digital output 3: switch switch output on/off **Totalizer 1 to 3** • Totalize • Reset and hold • Preset and hold • Stop • Operating mode configuration: – Net flow total – Forward flow total – Reverse flow total
Supported functions	• Identification & Maintenance Simplest device identification on the part of the control system and nameplate • PROFIBUS upload/download Reading and writing parameters is up to ten times faster with PROFIBUS upload/download • Condensed status Simplest and self-explanatory diagnostic information by categorizing diagnostic messages that occur
Configuration of the device address	• DIP switches on the I/O electronics module • Via operating tools (e.g. FieldCare)

Modbus RS485

Protocol	Modbus Applications Protocol Specification V1.1
Device type	Slave
Slave address range	1 to 247
Broadcast address range	0

Function codes	• 03: Read holding register • 04: Read input register • 06: Write single registers • 08: Diagnostics • 16: Write multiple registers • 23: Read/write multiple registers
Broadcast messages	Supported by the following function codes: • 06: Write single registers • 16: Write multiple registers • 23: Read/write multiple registers
Supported baud rate	• 1 200 BAUD • 2 400 BAUD • 4 800 BAUD • 9 600 BAUD • 19 200 BAUD • 38 400 BAUD • 57 600 BAUD • 115 200 BAUD
Data transfer mode	• ASCII • RTU
Data access	Each device parameter can be accessed via Modbus RS485. ☐ For Modbus register information

EtherNet/IP

Protocol	• The CIP Networks Library Volume 1: Common Industrial Protocol • The CIP Networks Library Volume 2: EtherNet/IP Adaptation of CIP
Communication type	• 10Base-T • 100Base-TX
Device profile	Generic device (product type: 0x2B)
Manufacturer ID	0x49E
Device type ID	0x104A
Baud rates	Automatic $^{10}/_{100}$ Mbit with half-duplex and full-duplex detection
Polarity	Auto-polarity for automatic correction of crossed TxD and RxD pairs
Supported CIP connections	Max. 3 connections
Explicit connections	Max. 6 connections
I/O connections	Max. 6 connections (scanner)
Configuration options for measuring device	• DIP switches on the electronics module for IP addressing • Manufacturer-specific software (FieldCare) • Add-on Profile Level 3 for Rockwell Automation control systems • Web browser • Electronic Data Sheet (EDS) integrated in the measuring device
Configuration of the EtherNet interface	• Speed: 10 MBit, 100 MBit, auto (factory setting) • Duplex: half-duplex, full-duplex, auto (factory setting)
Configuration of the device address	• DIP switches on the electronics module for IP addressing (last octet) • DHCP • Manufacturer-specific software (FieldCare) • Add-on Profile Level 3 for Rockwell Automation control systems • Web browser • EtherNet/IP tools, e.g. RSLinx (Rockwell Automation)
Device Level Ring (DLR)	No

PROFINET

Protocol	"Application layer protocol for decentral device periphery and distributed automation", version 2.3
Conformity class	B
Communication type	100 MBit/s
Device profile	Application interface identifier 0xF600 Generic device
Manufacturer ID	0x11
Device type ID	0x844A
Device description files (GSD, DTM)	Information and files under: • On the product page for the device: Documents/Software → Device drivers •
Baud rates	Automatic 100 Mbit/s with full-duplex detection

Cycle times	From 8 ms
Polarity	Auto-polarity for automatic correction of crossed TxD and RxD pairs
Supported connections	▪ 1 x AR (Application Relation) ▪ 1 x Input CR (Communication Relation) ▪ 1 x Output CR (Communication Relation) ▪ 1 x Alarm CR (Communication Relation)
Configuration options for measuring device	▪ DIP switches on the electronics module, for device name assignment (last part) ▪ Manufacturer-specific software (FieldCare, DeviceCare) ▪ Web browser ▪ Device master file (GSD), can be read out via the integrated Web server of the measuring device
Configuration of the device name	▪ DIP switches on the electronics module, for device name assignment (last part) ▪ DCP protocol
Output values (from measuring device to automation system)	**Analog Input module (slot 1 to 14)** ▪ Mass flow ▪ Volume flow ▪ Corrected volume flow ▪ Target mass flow ▪ Carrier mass flow ▪ Density ▪ Reference density ▪ Concentration ▪ Temperature ▪ Carrier pipe temperature ▪ Electronic temperature ▪ Oscillation frequency ▪ Oscillation amplitude ▪ Frequency fluctuation ▪ Oscillation damping ▪ Tube damping fluctuation ▪ Signal asymmetry ▪ Exciter current **Discrete Input module (slot 1 to 14)** ▪ Empty pipe detection ▪ Low flow cut off **Diagnostics Input module (slot 1 to 14)** ▪ Last diagnostics ▪ Current diagnosis **Totalizer 1 to 3 (slot 15 to 17)** ▪ Mass flow ▪ Volume flow ▪ Corrected volume flow **Heartbeat Verification module (fixed assignment)** Verification status (slot 23) ℹ The range of options increases if the measuring device has one or more application packages.

Input values
(from automation system to measuring device)
	Analog Output module (fixed assignment)
	• External pressure (slot 18)
	• External temperature (slot 19)
	• External reference density (slot 20)
	
	Discrete Output module (fixed assignment)
	• Activate/deactivate positive zero return (slot 21)
	• Perform zero point adjustment (slot 22)
	
	Totalizer 1 to 3 (slot 15 to 17)
	• Totalize
	• Reset and hold
	• Preset and hold
	• Stop
	• Operating mode configuration:
	  – Net flow total
	  – Forward flow total
	  – Reverse flow total
	
	Heartbeat Verification module (fixed assignment)
	Start verification (slot 23)
	
	ℹ The range of options increases if the measuring device has one or more application packages.

Supported functions	• Identification & Maintenance
	Simple device identification via:
	  – Control system
	  – Nameplate
	• Measured value status
	The process variables are communicated with a measured value status
	• Blinking feature via the onsite display for simple device identification and assignment

Startup configuration

Startup configuration (NSU)	If startup configuration is enabled, the configuration of the most important device parameters is taken from the automation system and used.

	The following configuration is taken from the automation system:
	• Management
	  – Software revision
	  – Write protection
	• System units
	  – Mass flow
	  – Mass
	  – Volume flow
	  – Volume
	  – Corrected volume flow
	  – Corrected volume
	  – Density
	  – Reference density
	  – Temperature
	  – Pressure
	• Concentration application package
	  – Coefficients A0 to A4
	  – Coefficients B1 to B3
	• Sensor adjustment
	• Process param.
	  – Damping (flow, density, temperature)
	  – Flow override
	• Low flow cut off
	  – Assign process variable
	  – Switch-on/switch-off point
	  – Pressure shock suppression
	• Empty pipe detection
	  – Assign process variable
	  – Limit values
	  – Response time
	  – Max. damping
	• Corrected volume flow calculation
	  – External reference density
	  – Fixed reference density
	  – Reference temperature
	  – Linear expansion coefficient
	  – Square expansion coefficient
	• Measuring mode
	  – Medium
	  – Gas type
	  – Reference sound velocity
	  – Temperature coefficient sound velocity
	• External compensation
	  – Pressure compensation
	  – Pressure value
	  – External pressure
	• Diagnostic settings
	• Diagnostic behavior for diverse diagnostic information

Power supply

Terminal assignment Overview: housing version and connection versions
A0016770

A   Housing version: compact, aluminum coated
B   Housing version: compact, hygienic, stainless
C   Housing version: ultra-compact, hygienic, stainless
1   Connection version: 4-20 mA HART, pulse/frequency/switch output
1.1   Signal transmission: pulse/frequency/switch output
1.2   Signal transmission: 4-20 mA HART
1.3   Supply voltage
2   Connection version: Modbus RS485
2.1   Signal transmission
2.2   Supply voltage
3   Connection versions: EtherNet/IP and PROFINET
3.1   Signal transmission
3.2   Supply voltage
4   Connection version: PROFIBUS DP
4.1   Signal transmission
4.2   Supply voltage

Transmitter

Connection version 4-20 mA HART with pulse/frequency/switch output

Order code for "Output", option **B**

Depending on the housing version, the transmitters can be ordered with terminals or device plugs.

Order code for "Housing"	Connection methods available		Possible options for order code "Electrical connection"
	Outputs	Power supply	
Options A, B	Terminals	Terminals	▪ Option **A**: coupling M20x1 ▪ Option **B**: thread M20x1 ▪ Option **C**: thread G ½" ▪ Option **D**: thread NPT ½"
Options A, B	Device plugs → 🗏 30	Terminals	▪ Option **L**: plug M12x1 + thread NPT ½" ▪ Option **N**: plug M12x1 + coupling M20 ▪ Option **P**: plug M12x1 + thread G ½" ▪ Option **U**: plug M12x1 + thread M20
Options A, B, C	Device plugs → 🗏 30	Device plugs → 🗏 30	Option **Q**: 2 x plug M12x1
Order code for "Housing": ▪ Option **A**: compact, coated aluminum ▪ Option **B**: compact, hygienic, stainless ▪ Option **C** ultra-compact, hygienic, stainless

🔲 *2   Terminal assignment 4-20 mA HART with pulse/frequency/switch output*

1   Power supply: DC 24 V
2   Output 1: 4-20 mA HART (active)
3   Output 2: pulse/frequency/switch output (passive)

Order code for "Output"	Terminal number					
	Power supply		Output 1		Output 2	
	2 (L-)	1 (L+)	27 (−)	26 (+)	25 (−)	24 (+)
Option **B**	DC 24 V		4-20 mA HART (active)		Pulse/frequency/switch output (passive)	
Order code for "Output": Option **B**: 4-20 mA HART with pulse/frequency/switch output						

PROFIBUS DP connection version

For use in the non-hazardous area and Zone 2/Div. 2.

Order code for "Output", option **L**

Depending on the housing version, the transmitters can be ordered with terminals or device plugs.

Order code for "Housing"	Connection methods available		Possible options for order code "Electrical connection"
	Output	Power supply	
Options **A**, **B**	Terminals	Terminals	• Option **A**: coupling M20x1 • Option **B**: thread M20x1 • Option **C**: thread G ½" • Option **D**: thread NPT ½"
Options **A**, **B**	Device plugs → 🗐 30	Terminals	• Option **L**: plug M12x1 + thread NPT ½" • Option **N**: plug M12x1 + coupling M20 • Option **P**: plug M12x1 + thread G ½" • Option **U**: plug M12x1 + thread M20
Options **A**, **B**, **C**	Device plugs → 🗐 30	Device plugs → 🗐 30	Option **Q**: 2 x plug M12x1
Order code for "Housing": • Option **A**: compact, coated aluminum • Option **B**: compact, hygienic, stainless • Option **C** ultra-compact, hygienic, stainless			

🗐 3   PROFIBUS DP terminal assignment

1   Power supply: DC 24 V
2   PROFIBUS DP

Order code for "Output"	Terminal number			
	Power supply		Output	
	2 (L-)	1 (L+)	26 (RxD/TxD-P)	27 (RxD/TxD-N)
Option **L**	DC 24 V		B	A
Order code for "Output": Option **L**: PROFIBUS DP, for use in non-hazardous areas and Zone 2/div. 2				

Modbus RS485 connection version

For use in the non-hazardous area and Zone 2/Div. 2.

Order code for "Output", option **M**

Depending on the housing version, the transmitters can be ordered with terminals or device plugs.

Order code for "Housing"	Connection methods available		Possible options for order code "Electrical connection"
	Output	Power supply	
Options **A**, **B**	Terminals	Terminals	• Option **A**: coupling M20x1 • Option **B**: thread M20x1 • Option **C**: thread G ½" • Option **D**: thread NPT ½"
Options **A**, **B**	Device plugs → 🕮 30	Terminals	• Option **L**: plug M12x1 + thread NPT ½" • Option **N**: plug M12x1 + coupling M20 • Option **P**: plug M12x1 + thread G ½" • Option **U**: plug M12x1 + thread M20
Options **A**, **B**, **C**	Device plugs → 🕮 30	Device plugs → 🕮 30	Option **Q**: 2 x plug M12x1
Order code for "Housing": • Option **A**: compact, coated aluminum • Option **B**: compact, hygienic, stainless • Option **C** ultra-compact, hygienic, stainless

Pin assignment, device plug

Order codes for the M12x1 connectors, see the "Order code for **electrical connection**" column:
- 4-20 mA HART, pulse/frequency/switch output → 🖺 24
- PROFIBUS DP→ 🖺 25
- Modbus RS485 → 🖺 26
- EtherNet/IP → 🖺 28
- PROFINET→ 🖺 29

Supply voltage

For all connection versions except MODBUS RS485 intrinsically safe (device side)

Device plug MODBUS RS485 intrinsically safe with supply voltage → 🖺 31

Pin		Assignment
1	L+	DC 24 V
2		Not assigned
3		Not assigned
4	L-	DC 24 V
5		Grounding/shielding
Coding		**Plug/socket**
A		Plug

The following is recommended as a socket:
- Binder, series 763, part no. 79 3440 35 05
- Alternatively: Phoenix part no. 1669767 SAC-5P-M12MS
  - With the order code for "Output", option **B**: 4-20 mA HART, pulse/frequency/switch output
  - With the order code for "Output", option **N**: EtherNet/IP
- When using the device in a hazardous location: Use a suitably certified socket.

4-20 mA HART with pulse/frequency/switch output

Device plug for signal transmission (device side)

Pin		Assignment
1	+	4-20 mA HART (active)
2	-	4-20 mA HART (active)
3	+	Pulse/frequency/switch output (passive)
4	-	Pulse/frequency/switch output (passive)
5		Grounding/shielding
Coding		**Plug/socket**
A		Socket

- Recommended plug: Binder, series 763, part no. 79 3439 12 05
- When using the device in a hazardous location, use a suitably certified plug.

PROFIBUS DP

For use in the non-hazardous area and Zone 2/Div. 2.

Device plug for signal transmission (device side)

Pin		Assignment
1		Not assigned
2	A	PROFIBUS DP
3		Not assigned
4	B	PROFIBUS DP
5		Grounding/shielding
Coding		**Plug/socket**
B		Socket

- Recommended plug: Binder, series 763, part no. 79 4449 20 05
- When using the device in a hazardous location, use a suitably certified plug.

MODBUS RS485
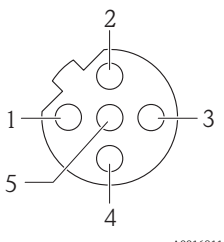

Device plug for signal transmission with supply voltage (device side), MODBUS RS485 (intrinsically safe)

Pin		Assignment
1	L+	Supply voltage, intrinsically safe
2	A	Modbus RS485 intrinsically safe
3	B	Modbus RS485 intrinsically safe
4	L-	Supply voltage, intrinsically safe
5		Grounding/shielding
Coding		**Plug/socket**
A		Plug

- Recommended socket: Binder, series 763, part no. 79 3439 12 05
- When using the device in a hazardous location: Use a suitably certified socket.

Device plug for signal transmission (device side), MODBUS RS485 (not intrinsically safe)
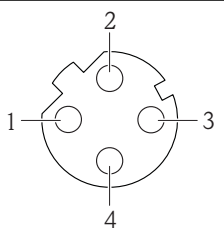

For use in the non-hazardous area and Zone 2/Div. 2.

Pin		Assignment
1		Not assigned
2	A	Modbus RS485
3		Not assigned
4	B	Modbus RS485
5		Grounding/shielding
Coding		Plug/socket
B		Socket

- Recommended plug: Binder, series 763, part no. 79 4449 20 05
- When using the device in a hazardous location, use a suitably certified plug.

EtherNet/IP
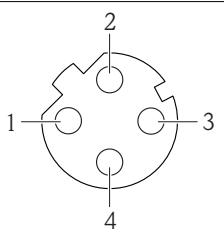

Device plug for signal transmission (device side)

Pin		Assignment
1	+	Tx
2	+	Rx
3	-	Tx
4	-	Rx
Coding		Plug/socket
D		Socket

Recommended plug:
- Binder, series 763, part no. 99 3729 810 04
- Phoenix, part no. 1543223 SACC-M12MSD-4Q
- When using the device in a hazardous location, use a suitably certified plug.

PROFINET

Device plug for signal transmission (device side)

Pin		Assignment
1	+	TD +
2	+	RD +
3	-	TD −
4	-	RD −
Coding		Plug/socket
D		Socket

Recommended plug:
- Binder, series 763, part no. 99 3729 810 04
- Phoenix, part no. 1543223 SACC-M12MSD-4Q
- When using the device in a hazardous location, use a suitably certified plug.

Supply voltage	The power unit must be tested to ensure it meets safety requirements (e.g. PELV, SELV).

Transmitter

For device version with communication type:
- HART, PROFIBUS DP, EtherNet/IP: DC 20 to 30 V
- Modbus RS485, device version:
  - For use in the non-hazardous area and Zone 2/Div. 2: DC 20 to 30 V
  - For use in the intrinsically safe area: power supply via Safety Barrier Promass 100

Safety Barrier Promass 100

DC 20 to 30 V

Power consumption

Transmitter

Order code for "Output"	Maximum Power consumption
Option **B**: 4-20 mA HART with pulse/frequency/switch output	3.5 W
Option **L**: PROFIBUS DP	3.5 W
Option **M**: Modbus RS485, for use in intrinsically safe areas	2.45 W
Option **N**: EtherNet/IP	3.5 W
Option **R**: PROFINET	3.5 W

Safety Barrier Promass 100

Order code for "Output"	Maximum Power consumption
Option **M**: Modbus RS485, for use in intrinsically safe areas	4.8 W

Current consumption

Transmitter

Order code for "Output"	Maximum Current consumption	Maximum switch-on current
Option **B**: 4-20mA HART, pul./freq./switch output	145 mA	18 A (< 0.125 ms)
Option **L**: PROFIBUS DP	145 mA	18 A (< 0.125 ms)
Option **M** Modbus RS485, for use in non-hazardous areas and Zone 2/Div. 2	90 mA	10 A (< 0.8 ms)
Option **M**: Modbus RS485, for use in intrinsically safe areas	145 mA	16 A (< 0.4 ms)
Option **N**: EtherNet/IP	145 mA	18 A (< 0.125 ms)
Option **R**: PROFINET	145 mA	18 A (< 0.125 ms)

Safety Barrier Promass 100

Order code for "Output"	Maximum Current consumption	Maximum switch-on current
Option **M**: Modbus RS485, for use in intrinsically safe areas	230 mA	10 A (< 0.8 ms)

Power supply failure

- Totalizers stop at the last value measured.
- Depending on the device version, the configuration is retained in the device memory or in the plug-in memory (HistoROM DAT).
- Configuration is retained in the plug-in memory (HistoROM DAT).
- Error messages (incl. total operated hours) are stored.

Electrical connection

Connecting the transmitter
A   Housing version: compact, aluminum coated
B   Housing version: compact hygienic, stainless
1   Cable entry or device plug for signal transmission
2   Cable entry or device plug for supply voltage
C   Housing version: ultra-compact, hygienic, stainless, M12 device plug
3   Device plug for signal transmission
4   Device plug for supply voltage

- Terminal assignment → 🖺 23
- Pin assignment, device plug → 🖺 30

In the case of device versions with a connector, the transmitter housing does not need to be opened to connect the signal cable or power supply cable.

Connection examples

Current output 4-20 mA HART
🖾 *9   Connection example for 4-20 mA HART current output (active)*

1   Automation system with current input (e.g. PLC)
2   Cable shield, observe cable specifications
3   Connection for HART operating devices
4   Resistor for HART communication (≥ 250 Ω): observe maximum load
5   Analog display unit: observe maximum load

3   Connection for HART operating devices
4   Analog display unit
5   Transmitter
6   Sensor for external measured variable
18   Connection example for HART input (master mode) via current output (active)

1   Automation system with current input (e.g. PLC).
    Prerequisite: automation system with HART version 6, HART commands 113 and 114 can be processed.
2   Cable shield, observe cable specifications
3   Resistor for HART communication (≥ 250 Ω): observe maximum load
4   Connection for HART operating devices
5   Analog display unit
6   Transmitter
7   Sensor for external measured variable

| Potential equalization | **Requirements** |

No special measures for potential equalization are required.

Please consider the following to ensure correct measurement:
• Same electrical potential for the fluid and sensor
• Company-internal grounding concepts

> For devices intended for use in hazardous locations, please observe the guidelines in the Ex documentation (XA).

| Terminals | **Transmitter**
Spring terminals for wire cross-sections0.5 to 2.5 mm² (20 to 14 AWG) |

Safety Barrier Promass 100
Plug-in screw terminals for wire cross-sections0.5 to 2.5 mm² (20 to 14 AWG)

| Cable entries | • Cable gland: M20 × 1.5 with cable Φ6 to 12 mm (0.24 to 0.47 in)
• Thread for cable entry:
  – NPT ½"
  – G ½"
  – M20 |

| Cable specification | **Permitted temperature range** |

• −40 ℃ (−40 ℉) to +80 ℃ (+176 ℉)
• Minimum requirement: cable temperature range ≥ ambient temperature +20 K

Power supply cable

Standard installation cable is sufficient.

Signal cable

Current output

For 4-20 mA HART: Shielded cable recommended. Observe grounding concept of the plant.

Pulse/frequency/switch output

Standard installation cable is sufficient.

PROFIBUS DP

The IEC 61158 standard specifies two types of cable (A and B) for the bus line which can be used for every transmission rate. Cable type A is recommended.

Cable type	A
Characteristic impedance	135 to 165 Ω at a measuring frequency of 3 to 20 MHz
Cable capacitance	<30 pF/m
Wire cross-section	>0.34 mm² (22 AWG)
Cable type	Twisted pairs
Loop resistance	≤110 Ω/km
Signal damping	Max. 9 dB over the entire length of the cable cross-section
Shield	Copper braided shielding or braided shielding with foil shield. When grounding the cable shield, observe the grounding concept of the plant.

Modbus RS485

The EIA/TIA-485 standard specifies two types of cable (A and B) for the bus line which can be used for every transmission rate. Cable type A is recommended.

Cable type	A
Characteristic impedance	135 to 165 Ω at a measuring frequency of 3 to 20 MHz
Cable capacitance	<30 pF/m
Wire cross-section	>0.34 mm² (22 AWG)
Cable type	Twisted pairs
Loop resistance	≤110 Ω/km
Signal damping	Max. 9 dB over the entire length of the cable cross-section
Shield	Copper braided shielding or braided shielding with foil shield. When grounding the cable shield, observe the grounding concept of the plant.

EtherNet/IP

The standard ANSI/TIA/EIA-568-B.2 Annex specifies CAT 5 as the minimum category for a cable used for EtherNet/IP. CAT 5e and CAT 6 are recommended.

> For more information on planning and installing EtherNet/IP networks, please refer to the "Media Planning and Installation Manual. EtherNet/IP" of ODVA Organization

PROFINET

Standard IEC 61156-6 specifies CAT 5 as the minimum category for a cable used for PROFINET. CAT 5e and CAT 6 are recommended.

> For more information on planning and installing PROFINET networks, see: "PROFINET Cabling and Interconnection Technology", Guideline for PROFINET

Connecting cable between Safety Barrier Promass 100 and measuring device

Cable type	Shielded twisted-pair cable with 2x2 wires. When grounding the cable shield, observe the grounding concept of the plant.
Maximum cable resistance	2.5 Ω, one side

> Comply with the maximum cable resistance specifications to ensure the operational reliability of the measuring device.

The maximum cable length for individual wire cross-sections is specified in the table below. Observe the maximum capacitance and inductance per unit length of the cable and connection values for hazardous areas .

Wire cross-section		Maximum cable length	
[mm²]	[AWG]	[m]	[ft]
0.5	20	70	230
0.75	18	100	328
1.0	17	100	328
1.5	16	200	656
2.5	14	300	984

Performance characteristics

Reference operating conditions
- Error limits based on ISO 11631
- Water with +15 to +45 ℃ (+59 to +113 ℉) at 2 to 6 bar (29 to 87 psi)
- Specifications as per calibration protocol
- Accuracy based on accredited calibration rigs that are traced to ISO 17025.

  To obtain measured errors, use the *Applicator* sizing tool → 🖺 88

Maximum measured error   o.r. = of reading; 1 g/cm³ = 1 kg/l; T = medium temperature

Base accuracy

Accuracy of outputs

In the case of analog outputs, the output accuracy must also be considered for the measured error; in contrast, this need not be considered in the case of fieldbus outputs (e.g. Modbus RS485, EtherNet/IP).

The outputs have the following base accuracy specifications.

Current output

Accuracy	Max. ±5 µA

Pulse/frequency output

o.r. = of reading

Accuracy	Max. ±50 ppm o.r. (across the entire ambient temperature range)

Repeatability

o.r. = of reading; 1 g/cm^3 = 1 kg/l; T = medium temperature

Base repeatability

Mass flow and volume flow (liquids)
±0.05 % o.r.

Mass flow (gases)
±0.25 % o.r.

> Design fundamentals → 🖺 43

Density (liquids)
±0.00025 g/cm³

Temperature
±0.25 ℃ ± 0.0025 · T ℃ (±0.45 ℉ ± 0.0015 · (T−32) ℉)

Response time	The response time depends on the configuration (damping).

Influence of ambient temperature	**Current output** o.r. = of reading

Temperature coefficient	Max. ±0.005% o.r./℃

Pulse/frequency output

Temperature coefficient	No additional effect. Included in accuracy.

Influence of medium temperature	**Mass flow and volume flow** When there is a difference between the temperature for zero point adjustment and the process temperature, the typical measured error of the sensor is ±0.0002 % of the full scale value/℃ (±0.0001 % of the full scale value/℉). **Density** When there is a difference between the density calibration temperature and the process temperature, the typical measured error of the sensor is ±0.00005 g/cm³ /℃ (±0.000025 g/cm³ /℉). Field density calibration is possible. **Wide-range density specification (special density calibration)** If the process temperature is outside the valid range (→ 🖺 41) the measured error is ±0.00005 g/cm³ /℃ (±0.000025 g/cm³ /℉)
1   Field density calibration, for example at +20 ℃ (+68 ℉)
2   Special density calibration

Temperature
±0.005 · T ℃ (± 0.005 · (T − 32) ℉)

Influence of medium pressure	A difference between the calibration pressure and process pressure does not affect accuracy.

Design fundamentals	o.r. = of reading, o.f.s. = of full scale value BaseAccu = base accuracy in % o.r., BaseRepeat = base repeatability in % o.r.

MeasValue = measured value; ZeroPoint = zero point stability

Calculation of the maximum measured error as a function of the flow rate

Installation

No special measures such as supports are necessary. External forces are absorbed by the construction of the device.

Mounting location

A0023344
To prevent measuring errors arising from accumulation of gas bubbles in the measuring tube, avoid the following mounting locations in the pipe:
• Highest point of a pipeline.
• Directly upstream of a free pipe outlet in a down pipe.

Installation in down pipes

However, the following installation suggestion allows for installation in an open vertical pipeline. Pipe restrictions or the use of an orifice with a smaller cross-section than the nominal diameter prevent the sensor running empty while measurement is in progress.
🖾 *19   Installation in a down pipe (e.g. for batching applications)*

1   Supply tank
2   Sensor
3   Orifice plate, pipe restriction
4   Valve
5   Batching tank
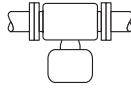

DN		Ø orifice plate, pipe restriction	
[mm]	[in]	[mm]	[in]
1	$\frac{1}{24}$	0.8	0.03
2	$\frac{1}{12}$	1.5	0.06
4	$\frac{1}{8}$	3.0	0.12

Orientation

The direction of the arrow on the sensor nameplate helps you to install the sensor according to the flow direction (direction of medium flow through the piping).

	Orientation		Recommendation
A	Vertical orientation		✅✅
B	Horizontal orientation, transmitter head up		✅✅ [1] Exceptions:

	Orientation		Recommendation
C	Horizontal orientation, transmitter head down	A0015590	✅✅ [2] Exceptions:
D	Horizontal orientation, transmitter head at side	A0015592	❌

1) Applications with low process temperatures may decrease the ambient temperature. To maintain the minimum ambient temperature for the transmitter, this orientation is recommended.
2) Applications with high process temperatures may increase the ambient temperature. To maintain the maximum ambient temperature for the transmitter, this orientation is recommended.

Inlet and outlet runs	No special precautions need to be taken for fittings which create turbulence, such as valves, elbows or T-pieces, as long as no cavitation occurs → 🖹 55.

Special mounting instructions	**Rupture disk** Make sure that the function and operation of the rupture disk is not impeded through the installation of the device. The position of the rupture disk is indicated on a sticker beside it. For additional information that is relevant to the process → 🖹 54. The existing connecting nozzles are not intended for the purpose of rinsing or pressure monitoring, but instead serve as the mounting location for the rupture disk. In the internal thread of the rupture disk a discharge device can be screwed to drain the leaking medium in case of a failure of the rupture disk.
A0019676

Wall mounting

⚠ WARNING

Incorrect sensor mounting

Risk of injury if measuring tube breaks

▶ The sensor should never be installed in a pipe in a way that it is freely suspended
▶ Using the base plate, mount the sensor directly on the floor, wall or ceiling.
▶ Support the sensor on a securely mounted support base (e.g. angle bracket).

The following mounting versions are recommended for the installation.

Vertical
• Mounted directly on a wall using the base plate, or
• Device supported on an angle bracket mounted on the wall
Horizontal
Device standing on a solid support base
Post retainer

The post retainer mounting kit is used to secure the device to a pipe or post (order code for "Accessories", option PR).
20   Post retainer mounting kit

1   8 x hexagonal nut M8 × 0.8
2   4 x threaded bolt M8 × 150
3   1 x post retaining plate
4   1 x post securing plate
5   4 x spring washer M8
6   4 x hexagon bolt M6 × 20
7   4 x spring washer M6
8   4 x hexagonal nut M6 × 0.8

Zero point adjustment

All measuring devices are calibrated in accordance with state-of-the-art technology. Calibration takes place under reference conditions → 🖹 41. Therefore, a zero point adjustment in the field is generally not required.

Experience shows that zero point adjustment is advisable only in special cases:
• To achieve maximum measuring accuracy even with low flow rates
• Under extreme process or operating conditions (e.g. very high process temperatures or very high-viscosity fluids).

Explosion hazards arising from gas and dust

Determining the temperature class and surface temperature with the temperature table
- In the case of gas: Determine the temperature class as a function of the ambient temperature T_a and the medium temperature T_m.
- In the case of dust: Determine the maximum surface temperature as a function of the maximum ambient temperature T_a and the maximum medium temperature T_m.

Example
- Measured maximum ambient temperature: $T_{ma} = 47$ °C
- Measured maximum medium temperature: $T_{mm} = 108$ °C

A0019758

◈ *22 Procedure for determining the maximum surface temperature*

1. Select device (optional).

2. In the column for the maximum ambient temperature T_a select the temperature that is immediately greater than or equal to the measured maximum ambient temperature T_{ma} that is present.
   ↳ T_a = 50 ℃.
      The row showing the maximum medium temperature is determined.

3. Select the maximum medium temperature T_m of this row, which is larger or equal to the measured maximum medium temperature T_{mm}.
   ↳ The column with the temperature class for gas is determined: 108 ℃ ≤ 120℃ → T4.

4. The maximum temperature of the temperature class determined corresponds to the maximum surface temperature for dust: T4 = 135 ℃

Storage temperature	−40 to +80 ℃ (−40 to +176 ℉), preferably at +20 ℃ (+68 ℉) (standard version)
	−50 to +80 ℃ (−58 to +176 ℉) (Order code for *"Test, certificate"*, option JM)
Climate class	DIN EN 60068-2-38 (test Z/AD)
Degree of protection	**Transmitter and sensor** • As standard: IP66/67, type 4X enclosure • With the order code for "Sensor options", option **CM**: IP69K can also be ordered • When housing is open: IP20, type 1 enclosure • Display module: IP20, type 1 enclosure **Safety Barrier Promass 100** IP20

Vibration resistance	**Compact version**
	• Vibration, sinusoidal according to IEC 60068-2-6
	  – 2 to 8.4 Hz, 3.5 mm peak
	  – 8.4 to 2 000 Hz, 1 g peak
	• Vibration broad-band random, according to IEC 60068-2-64
	  – 10 to 200 Hz, 0.003 g^2/Hz
	  – 200 to 2 000 Hz, 0.001 g^2/Hz
	  – Total: 1.54 g rms

Shock resistance	**Compact version** Shock, half-sine according to IEC 60068-2-27 6 ms 30 g
Shock resistance	**Compact version** Rough handling shocks according to IEC 60068-2-31
Interior cleaning	• Cleaning in place (CIP) • Sterilization in place (SIP) **Options** Oil- and grease-free version for wetted parts, without inspection certificate Order code for "Service", option **HA**

Electromagnetic compatibility (EMC)	• Depends on the communication protocol:
	  – HART, PROFIBUS DP, Modbus RS485, EtherNet/IP:
	    As per IEC/EN 61326 and NAMUR Recommendation 21 (NE 21)
	  – PROFINET: as per IEC/EN 61326
	• Complies with emission limits for industry as per EN 55011 (Class A)
	• Device version with PROFIBUS DP: Complies with emission limits for industry as per EN 50170 Volume 2, IEC 61784
	
	The following applies for PROFIBUS DP: If baud rates > 1.5 MBaud, an EMC cable entry must be used and the cable shield must continue as far as the terminal wherever possible.
	
	For details, refer to the Declaration of Conformity.

Process

Medium temperature range	**Sensor**
	–50 to +205 °C (–58 to +401 °F)
	
	Seals
	• No internal seals

Order code for "Mounting kit", option PH, PS, PT, PU
🔲 25 *With flange material: 1.4539 (904L), Alloy C22; lap joint flanges (not wetted): 1.4404 (SUS F316L)*

Tri-Clamp process connection

The clamp connections are suitable up to a maximum pressure of 16 bar (232 psi). Please observe the operating limits of the clamp and seal used as they could be under 16 bar (232 psi). The clamp and seal are not included in the scope of supply.

Process connection 4-VCO-4, ¼ NPTF, SWAGELOK
🔲 26 *With flange connection 4-VCO-4 coupling: 1.4539 (904L); ¼ NPTF threaded adapter: 1.4539 (904L); ¼" or ⅛" SWAGELOK coupling: 1.4539 (904L)*
🔲 27 *With flange connection 4-VCO-4 coupling: Alloy C22; ¼ NPTF threaded adapter: Alloy C22; ¼" or ⅛" SWAGELOK coupling: 1.4539 (904L)*

Process connections for high-pressure version (DN 2, 4)
28 *With flange connection 4-VCO-4 coupling: 1.4539 (904L); ¼ NPT threaded adapter: 1.4539 (904L); ¼"
or ⅛" SWAGELOK coupling: 1.4539 (904L)*

	Secondary containment pressure rating			

Secondary containment
pressure rating

The sensor housing is filled with dry nitrogen and protects the electronics and mechanics inside.

The following secondary containment pressure rating is only valid for a fully welded sensor housing
and/or a device equipped with closed purge connections (never opened/as delivered).

DN		Secondary containment pressure rating (designed with a safety factor ≥ 4)		Secondary containment burst pressure	
[mm]	[in]	[bar]	[psi]	[bar]	[psi]
1	¹⁄₂₄	25	362	175	2535
2	¹⁄₁₂	25	362	155	2245
4	⅛	25	362	130	1885

If there is a risk of measuring tube failure due to process characteristics, e.g. with corrosive
fluids, we recommend the use of sensors whose secondary containment is equipped with special
pressure monitoring connections (order code for "Sensor option", option CH "Purge connection").

With the help of these connections, the fluid collected in the secondary containment can be
bled off in the event of tube failure. This is especially important in high-pressure gas
applications. These connections can also be used for gas purging (gas detection).

Do not open the purge connections unless the containment can be filled immediately with a
dry, inert gas. Use only low gauge pressure to purge. Maximum pressure: 5 bar (72.5 psi).

If a device fitted with purge connections is connected to the purge system, the maximum
nominal pressure is determined by the purge system itself or by the device, depending on which
component has the lower nominal pressure.

If, on the other hand, the device is fitted with a rupture disk, the rupture disk is decisive for the
maximum nominal pressure → 🗎 54.

Dimensions:

Rupture disk

To increase the level of safety, a device version with a rupture disk with a triggering pressure of
10 to 15 bar (145 to 217.5 psi) can be used (order code for "Sensor option", option CA "rupture disk").
Special mounting instructions: → 🗎 46

Rupture disks cannot be combined with the separately available heating jacket → 🗎 87→ 🗎 87.

Flow limit

Select the nominal diameter by optimizing between the required flow range and permissible pressure
loss.

For an overview of the full scale values for the measuring range, see the "Measuring range"
section

- The minimum recommended full scale value is approx. 1/20 of the maximum full scale value
- In most applications, 20 to 50 % of the maximum full scale value can be considered ideal
- A low full scale value must be selected for abrasive media (such as liquids with entrained solids): flow velocity < 1 m/s (< 3 ft/s).
- For gas measurement the following rules apply:
  – The flow velocity in the measuring tubes should not exceed half the sound velocity (0.5 Mach)
  – The maximum mass flow depends on the density of the gas: formula

Pressure loss

To calculate the pressure loss, use the *Applicator* sizing tool → 🖹 88

System pressure

It is important that cavitation does not occur, or that gases entrained in the liquids do not outgas. This is prevented by means of a sufficiently high system pressure.

For this reason, the following mounting locations are recommended:
- At the lowest point in a vertical pipe
- Downstream from pumps (no danger of vacuum)
Thermal insulation

In the case of some fluids, it is important that the heat radiated from the sensor to the transmitter is kept to a minimum. A wide range of materials can be used for the required insulation.
a   Minimum distance to insulation
t   maximum Insulation thickness

The minimum distance between the transmitter housing and the insulation is 10 mm (0.39 in) so that the transmitter head remains completely exposed.
🖼 *29   Maximum recommended insulation thickness depending on the temperature of the medium and the ambient temperature*

t	Insulation thickness
T_m	Medium temperature
$T_{40(104)}$	Maximum recommended insulation thickness at an ambient temperature of $T_a = 40\ °C\ (104\ °F)$
$T_{60(140)}$	Maximum recommended insulation thickness at an ambient temperature of $T_a = 60\ °C\ (140\ °F)$

NOTICE

Danger of overheating with insulation
▸ Ensure that the temperature at the lower end of the transmitter housing does not exceed 80 °C (176 °F)

NOTICE

The insulation can also be thicker than the maximum recommended insulation thickness.
Prerequisite:
▸ Ensure that convection takes place on a sufficiently large scale at the transmitter neck.
▸ Ensure that a sufficiently large area of the housing support remains exposed. The uncovered part serves as a radiator and protects the electronics from overheating and excessive cooling.

Heating

Some fluids require suitable measures to avoid loss of heat at the sensor.

Heating options
- Electrical heating, e.g. with electric band heaters
- Via pipes carrying hot water or steam
- Via heating jackets

NOTICE

Danger of overheating when heating
▸ Ensure that the temperature at the lower end of the transmitter housing does not exceed 80 °C (176 °F).
▸ Ensure that convection takes place on a sufficiently large scale at the transmitter neck.
▸ Ensure that a sufficiently large area of the housing support remains exposed. The uncovered part serves as a radiator and protects the electronics from overheating and excessive cooling.

Vibrations

The high oscillation frequency of the measuring tubes ensures that the correct operation of the measuring system is not influenced by plant vibrations.

Mechanical construction

Adapter for cable entry with internal thread NPT ½"	

Order code for "Housing", option B "Compact, hygienic, stainless"

The various cable entries are suitable for hazardous and non-hazardous areas.

Cable entry/cable gland	Material
Cable gland M20 × 1.5	Stainless steel, 1.4404 (316L)
Adapter for cable entry with internal thread G ½"	
Adapter for cable entry with internal thread NPT ½"	

Device plug

Electrical connection	Material
Plug M12x1	• Socket: Stainless steel, 1.4404 (316L) • Contact housing: Polyamide • Contacts: Gold-plated brass

Sensor housing

- Acid and alkali-resistant outer surface
- Stainless steel 1.4301 (304)

Measuring tubes

Stainless steel, 1.4539 (904L); Alloy C22, 2.4602 (UNS N06022)

Process connections

VCO coupling
- Stainless steel, 1.4539 (904L)
- Alloy C22, 2.4602 (UNS N06022)

Tri-Clamp
Stainless steel, 1.4539 (904L)

Mounting kit, flanges as per EN 1092-1 (DIN 2501), ASME B16.5, JIS B2220
- Stainless steel, 1.4539 (904L)
- Alloy C22, 2.4602 (UNS N06022)

Mounting kit, lap joint flanges as per EN 1092-1 (DIN 2501), ASME B16.5, JIS B2220
Stainless steel, 1.4404 (316/316L)

Mounting kit, SWAGELOK
Stainless steel, 1.4539 (904L)

Mounting kit, NPTF
- Stainless steel, 1.4539 (904L)
- Alloy C22

> List of all available process connections → 🖹 78

Seals

Welded process connections without internal seals

Seals for mounting kit
- Viton
- EPDM
- Silicone
- Kalrez

|	

Process connections	- Fixed flange connections:
	  – EN 1092-1 (DIN 2501) flange
	  – EN 1092-1 (DIN 2512N) flange
	  – ASME B16.5 flange
	  – JIS B2220 flange
	- Clamp connections
	  Tri-Clamp (OD tubes), DIN 11866 series C
	- VCO connections
	  4-VCO-4
	- Mounting kits for VCO connections
	  – Flange EN 1092-1 (DIN 2501)
	  – Flange ASME B16.5
	  – Flange JIS B2220
	  – SWAGELOK
	  – NPTF
	
	  For information on the different materials used in the process connections → 🖹 77

Surface roughness	All data relate to parts in contact with fluid. - Not polished - Ra_{max} = 0.8 µm (32 µin) - Ra_{max} = 0.4 µm (16 µin)

Operability

Operating concept	**Operator-oriented menu structure for user-specific tasks** • Commissioning • Operation • Diagnostics • Expert level

Quick and safe commissioning
• Individual menus for applications
• Menu guidance with brief explanations of the individual parameter functions

Reliable operation
• Operation in the following languages:
  – Via "FieldCare" operating tool:
    English, German, French, Spanish, Italian, Chinese, Japanese
  – Via integrated Web browser (only available for device versions with HART, PROFIBUS DP, PROFINET and EtherNet/IP):
    English, German, French, Spanish, Italian, Dutch, Portuguese, Polish, Russian, Turkish, Chinese, Japanese, Bahasa (Indonesian), Vietnamese, Czech, Swedish, Korean
• Uniform operating philosophy applied to operating tools and Web browser
• If replacing the electronic module, transfer the device configuration via the plug-in memory (HistoROM DAT) which contains the process and measuring device data and the event logbook. No need to reconfigure.
  For devices with Modbus RS485, the data recovery function is implemented without the plug-in memory (HistoROM DAT).

Efficient diagnostics increase measurement availability
• Troubleshooting measures can be called up via the operating tools and Web browser
• Diverse simulation options
• Status indicated by several light emitting diodes (LEDs) on the electronic module in the housing compartment

Local display	A local display is only available for device versions with the following communication protocols: HART, PROFIBUS-DP, PROFINET, EtherNet/IP

The local display is only available with the following device order code:
Order code for "Display; Operation", option **B**: 4-line; lit, via communication

Display element
• 4-line liquid crystal display with 16 characters per line.
• White background lighting; switches to red in event of device errors.
• Format for displaying measured variables and status variables can be individually configured.
• Permitted ambient temperature for the display: −20 to +60 °C (−4 to +140 °F). The readability of the display may be impaired at temperatures outside the temperature range.

Remote operation	**Via HART protocol**

This communication interface is available in device versions with a HART output.

⊡ *42   Options for remote operation via HART protocol*

1   Control system (e.g. PLC)
2   Field Communicator 475
3   Computer with operating tool (e.g. FieldCare, AMS Device Manager, SIMATIC PDM)
4   Commubox FXA195 (USB)
5   Field Xpert SFX350 or SFX370
6   VIATOR Bluetooth modem with connecting cable
7   Transmitter

Via PROFIBUS DP network

This communication interface is available in device versions with PROFIBUS DP.
⊡ *43   Options for remote operation via PROFIBUS DP network*

1   Automation system
2   Computer with PROFIBUS network card
3   PROFIBUS DP network
4   Measuring device

Via Ethernet-based fieldbus

This communication interface is available in device versions with EtherNet/IP.

🖼 44   *Options for remote operation via Ethernet-based fieldbus*

1   Control system, e.g. "RSLogix" (Rockwell Automation)
2   Workstation for measuring device operation: with Add-on Profile Level 3 for "RSLogix 5000" (Rockwell Automation) or with Electronic Data Sheet (EDS)
3   Computer with Web browser (e.g. Internet Explorer) for accessing the integrated device Web server or with "FieldCare" operating tool with COM DTM "CDI Communication TCP/IP"
4   Ethernet switch
5   Measuring device

Via PROFINET network

This communication interface is available in device versions with PROFINET.

🖼 45   *Options for remote operation via PROFINET network*

1   Automation system, e.g. Simatic S7 (Siemens)
2   Computer with Web browser (e.g. Internet Explorer) for accessing the integrated device Web server or with "FieldCare" operating tool with COM DTM "CDI Communication TCP/IP"
3   Switch, e.g. Scalance X204 (Siemens)
4   Measuring device
Service interface	**Via service interface (CDI-RJ45)**

This communication interface is present in the following device version:
- Order code for "Output", option **B**: 4-20 mA HART, pulse/frequency/switch output
- Order code for "Output", option **L**: PROFIBUS DP
- Order code for "Output", option **N**: EtherNet/IP
- Order code for "Output", option **R**: PROFINET

HART

🖻 *46   Connection for the order code for "Output", option B: 4-20 mA HART, pulse/frequency/switch output*

1   Service interface (CDI -RJ45) of the measuring device with access to the integrated Web server
2   Computer with Web browser (e.g. Internet Explorer) for accessing the integrated device Web server or with "FieldCare" operating tool with COM DTM "CDI Communication TCP/IP"
3   Standard Ethernet connecting cable with RJ45 plug

PROFIBUS DP
🖻 *47   Connection for order code for "Output", option L: PROFIBUS DP*

1   Service interface (CDI -RJ45) of the measuring device with access to the integrated Web server
2   Computer with Web browser (e.g. Internet Explorer) for accessing the integrated device Web server or with "FieldCare" operating tool with COM DTM "CDI Communication TCP/IP"
3   Standard Ethernet connecting cable with RJ45 plug

EtherNet/IP

🖼 *48   Connection for order code for "Output", option N: EtherNet/IP*

1   Service interface (CDI -RJ45) and EtherNet/IP interface of the measuring device with access to the integrated Web server
2   Computer with Web browser (e.g. Internet Explorer) for accessing the integrated device Web server or with "FieldCare" operating tool with COM DTM "CDI Communication TCP/IP"
3   Standard Ethernet connecting cable with RJ45 plug

PROFINET

🖼 *49   Connection for order code for "Output", option R: PROFINET*

1   Service interface (CDI -RJ45) and PROFINET interface of the measuring device with access to the integrated Web server
2   Computer with Web browser (e.g. Internet Explorer) for accessing the integrated device Web server or with "FieldCare" operating tool with COM DTM "CDI Communication TCP/IP"
*3   Standard Ethernet connecting cable with RJ45 plug*

Via service interface (CDI)

This communication interface is present in the following device version:
Order code for "Output", option **M**: Modbus RS485

Modbus RS485

A0016925

1 Service interface (CDI) of the measuring device
2 Commubox FXA291
3 Computer with "FieldCare" operating tool with COM DTM "CDI Communication FXA291"

Certificates and approvals

CE mark

The measuring system is in conformity with the statutory requirements of the applicable EC Directives. These are listed in the corresponding EC Declaration of Conformity along with the standards applied.

C-Tick symbol

The measuring system meets the EMC requirements of the "Australian Communications and Media Authority (ACMA)".

Ex approval

The measuring device is certified for use in hazardous areas and the relevant safety instructions are provided in the separate "Safety Instructions" (XA) document. Reference is made to this document on the nameplate.

ATEX/IECEx

Currently, the following versions for use in hazardous areas are available:

Ex ia

Category (ATEX)	Type of protection
II2G, II2D	Ex ia IIC T6...T1 Gb Ex tb IIIC Txx °C Db
II2G	Ex ia IIC T6...T1 Gb

Ex nA

Category (ATEX)	Type of protection
II3G	Ex nA IIC T6...T1 Gc or Ex nA IIC T5-T1 Gc

_C**CSA**_{US}

Currently, the following versions for use in hazardous areas are available:

IS (Ex i)
- Class I Division 1 Groups ABCD
- Class II Division 1 Groups EFG and Class III

NI (Ex nA)
Class I Division 2 Groups ABCD

Sanitary compatibility	• 3-A approval • EHEDG-tested

HART certification	**HART interface** The measuring device is certified and registered by the FieldComm Group. The measuring system meets all the requirements of the following specifications: • Certified according to HART 7 • The device can also be operated with certified devices of other manufacturers (interoperability)

Certification PROFIBUS	**PROFIBUS interface** The measuring device is certified and registered by the PROFIBUS User Organization (PNO). The measuring system meets all the requirements of the following specifications: • Certified in accordance with PROFIBUS PA Profile 3.02 • The device can also be operated with certified devices of other manufacturers (interoperability)

Certification PROFINET	**PROFINET interface**
	
	The measuring device is certified and registered by the PNO (PROFIBUS User Organization). The measuring system meets all the requirements of the following specifications:
	• Certified according to:
	  – Test specification for PROFINET devices
	  – PROFINET Security Level 1 – Net load test
	• The device can also be operated with certified devices of other manufacturers (interoperability)

EtherNet/IP certification	The measuring device is certified and registered by the ODVA (Open Device Vendor Association). The measuring system meets all the requirements of the following specifications: • Certified in accordance with the ODVA Conformance Test • EtherNet/IP Performance Test • EtherNet/IP PlugFest compliance • The device can also be operated with certified devices of other manufacturers (interoperability)

Modbus RS485 certification	The measuring device meets all the requirements of the MODBUS/TCP conformity test and has the "MODBUS/TCP Conformance Test Policy, Version 2.0". The measuring device has successfully passed all the test procedures carried out and is certified by the "MODBUS/TCP Conformance Test Laboratory" of the University of Michigan.

Other standards and guidelines	• EN 60529
	  Degrees of protection provided by enclosures (IP code)
	• IEC/EN 60068-2-6
	  Environmental influences: Test procedure - Test Fc: vibrate (sinusoidal).
	• IEC/EN 60068-2-31
	  Environmental influences: Test procedure - Test Ec: shocks due to rough handling, primarily for devices.
	• EN 61010-1
	  Safety requirements for electrical equipment for measurement, control and laboratory use - general requirements
	• IEC/EN 61326
	  Emission in accordance with Class A requirements. Electromagnetic compatibility (EMC requirements).
	• NAMUR NE 21
	  Electromagnetic compatibility (EMC) of industrial process and laboratory control equipment
	• NAMUR NE 32
	  Data retention in the event of a power failure in field and control instruments with microprocessors

- NAMUR NE 43
  Standardization of the signal level for the breakdown information of digital transmitters with analog output signal.
- NAMUR NE 53
  Software of field devices and signal-processing devices with digital electronics
- NAMUR NE 105
  Specifications for integrating fieldbus devices in engineering tools for field devices
- NAMUR NE 107
  Self-monitoring and diagnosis of field devices
- NAMUR NE 131
  Requirements for field devices for standard applications
- NAMUR NE 132
  Coriolis mass meter

Ordering information

Detailed ordering information is available from the following sources:

Product Configurator - the tool for individual product configuration
- Up-to-the-minute configuration data
- Depending on the device: Direct input of measuring point-specific information such as measuring range or operating language
- Automatic verification of exclusion criteria
- Automatic creation of the order code and its breakdown in PDF or Excel output format
-

Application packages

Many different application packages are available to enhance the functionality of the device. Such packages might be needed to address safety aspects or specific application requirements.

Detailed information on the application packages:
- Special Documentation for the device
- Special Documentation for the device

Heartbeat Technology

Package	Description
Heartbeat Verification +Monitoring	**Heartbeat Monitoring** Continuously supplies data, which are characteristic of the measuring principle, to an external condition monitoring system for the purpose of preventive maintenance or process analysis. These data enable the operator to: • Draw conclusions - using these data and other information - about the impact process influences (such as corrosion, abrasion, buildup etc.) have on the measuring performance over time. • Schedule servicing in time. • Monitor the process or product quality, e.g. gas pockets. **Heartbeat Verification** Meets the requirement for traceable verification to DIN ISO 9001:2008 Chapter 7.6 a) "Control of monitoring and measuring equipment". • Functional testing in the installed state without interrupting the process. • Traceable verification results on request, including a report. • Simple testing process via local operation or other operating interfaces. • Clear measuring point assessment (pass/fail) with high test coverage within the framework of manufacturer specifications. • Extension of calibration intervals according to operator's risk assessment.

Concentration

Package	Description
Concentration measurement and special density	**Calculation and outputting of fluid concentrations** Many applications use density as a key measured value for monitoring quality or controlling processes. The device measures the density of the fluid as standard and makes this value available to the control system. The "Special Density" application package offers high-precision density measurement over a wide density and temperature range particularly for applications subject to varying process conditions. With the help of the "Concentration Measurement" application package, the measured density is used to calculate other process parameters: • Temperature-compensated density (reference density). • Percentage mass of the individual substances in a two-phase fluid. (Concentration in %). • Fluid concentration is output with special units (°Brix, °Baumé, °API, etc.) for standard applications. The measured values are output via the digital and analog outputs of the device.
