Technical Information

prosonic T FMU230, FMU231

Ultrasonic Level Measurement

Compact transmitters for non-contact level measurement of fluids and coarse bulk materials

Application

The compact transmitters Prosonic T are used for continuous, non-contact level measurement in fluids and coarse bulk and lumpy materials (grain size from 4 mm onwards).

The maximum measuring range is

- FMU 230:
 - 4m in fluids
 - 2m in bulk materials
- FMU 231:
 - 7m in fluids
 - 3,5m in bulk materials

Your benefits

- Non-contact measurement method, therefore almost independent of product properties
- Integrated temperature sensor for time-of-flight correction. Accurate measurements, even for temperature changes
- Linearisation function for measured value output in any units
- with optional display
- simple mounting via G1½", G2", NPT 1½" or NPT 2" thread
- Two-wire instrument; level indicated by 4-20 mA output current

Function and system design

Time-of-flight method

E: Empty distance; **F:** Span (full distance); **D:** Distance from sensor membrane - product surface; **L:** Level; **BD:** Blocking distance

The sensor of the Prosonic T transmits ultrasonic pulses in the direction of the product surface. There, they are reflected back and received by the sensor. The Prosonic T measures the time t between pulse transmission and reception. The instrument uses the time t (and the velocity of sound c) to calculate the distance D between the sensor membrane and the product surface:

$$D = c \cdot t/2$$

As the device knows the empty distance E from a user entry, it can calculate the level as follows:

$$L = E - D$$

An integrated temperature sensor compensates for changes in the velocity of sound caused by temperature changes.

Signal evaluation

- Automatic suppression of up to 3 interference echoes (fixed target echoes)
- First echo detection

Calibration

Calibration is performed by entering the empty distance E (=zero) and the full distance F (=span).

E and F correspond to

- 4 mA or 20 mA respectively for the current output
- 0% or 100% respectively for the local display

Span F may not extend into the blocking distance BD . Level echos from the blocking distance cannot be evaluated due to the transient characteristics of the sensor and a wrong measured value may result.

For the version with on-site display, E and F can be entered directly as numbers. For the version without display, calibration can be performed for example by filling the vessel to the E and F point consecutively.

Linearisation

The linearisation function of the Prosonic T allows conversion of the measured value into any unit of length or volume. A linearisation table consisting of up to 11 value pairs can be entered manually or semi-automatically (by filling the vessel under controlled conditions).

Input

Measured variable	The distance D between the sensor membrane and the product surface is measured . Using the linearisation function, the device uses D to calculate: <ul style="list-style-type: none">■ level L in any units■ volume V in any units										
Measuring range	Upper limit: blocking distance <table border="1"><thead><tr><th>Instrument</th><th>blocking distance (BD)</th></tr></thead><tbody><tr><td>FMU 230</td><td>0,25 m</td></tr><tr><td>FMU 231</td><td>0,4 m</td></tr></tbody></table> The upper limit of the measuring distance is given by the blocking distance (page 2). Level echos within the blocking distance cannot be evaluated due to the transient characteristics of the sensor.	Instrument	blocking distance (BD)	FMU 230	0,25 m	FMU 231	0,4 m				
Instrument	blocking distance (BD)										
FMU 230	0,25 m										
FMU 231	0,4 m										
	Lower limit: Range of the sensor The measuring range is limited by the range of a sensor. The sensor range is, in turn, dependent on the operating conditions. To estimate the actual range, proceed as follows (see also the calculation example in the diagram): <ol style="list-style-type: none">1. Determine which of the influences shown in the following table are appropriate for your process.2. Add the corresponding attenuation values.3. From the total attenuation, use the diagram to calculate the range.

L00-FMU23xxxx-05-00-00-en-001

Operating frequency

Instrument	Operating frequency
FMU 230	approx. 70 kHz
FMU 231	approx. 50 kHz

Output

Output signal 4 ... 20 mA analog signal

Signal on alarm configurable:

- 3,8 mA
- 22 mA
- hold last value

Output damping 0 ... 255 s

Load

The maximum load (R_{max}) depends on the supply voltage (U).

Auxiliary energy

Electrical connection

Use screened two-core instrumentation cable. For optimal protection against electromagnetic interference, the screen should be grounded in the control room or the nearest earthing point. A good connection to ground is essential to good screening.

Supply voltage 12 ... 36 V_{DC}

Power consumption < 0,8 W

Cable entry

- Cable gland M20x1,5
- Cable entry G ½ or ½ NPT

cable diameter 5 ... 9mm

Performance characteristics

Reference operating conditions The specified performance characteristics are valid under the following reference conditions:

- Temperature = +20 °C
- Pressure = 1013 mbar abs.
- Humidity = 60 %
- Ideal reflective surface (e.g. calm, smooth fluid surface)
- No interference reflections within signal beam

Measured value resolution 3 mm

Measuring error 0,25 % of maximum measuring range (includes linearity, repeatability, and hysteresis)

Pulse frequency 0,5 ... 1 Hz

Reaction time approx. 5 s

Installation conditions

Installation variants

L00-FMUx3xxx-11-00-00-en-006

Blocking distance, nozzle mounting

Level echos from the blocking distance (BD) cannot be evaluated due to the transient characteristics of the sensor. Install the Prosonic T at a height so that the blocking distance BD is not undershot, even at maximum fill level. Use a pipe nozzle if you cannot maintain the blocking distance in any other way. The interior of the nozzle must be smooth and may not contain any edges or welded joints. In particular, there should be no burr on the inside of the tank side nozzle end. Note the specified limits for nozzle diameter and length.

L00-FMUx3xxx-11-00-00-de-007

Caution!

If the blocking distance is undershot, it may cause device malfunction.

Installation position

- Do not install the sensor in the middle of the tank (3). We recommend leaving a distance between the sensor and the tank wall (1) measuring $1/3$ of the tank radius.
- Use a protective cover, in order to protect the device from direct sun or rain (2).
- Avoid measurements through the filling curtain (4).
- Make sure that equipment (5) such as limit switches, temperature sensors, etc. are not located within the emitting angle α . In particular, symmetrical equipment (6) such as heating coils, baffles etc. can influence measurement.
- Align the sensor so that it is vertical to the product surface.
- Never install two identical ultrasonic measuring devices in a tank.
- To estimate the transmitted echo beam and its detection range, use the 3 dB emitting angle α :

Sensor	α	L	r
FMU 230	11°	4 m	0,38 m
FMU 231	11°	7 m	0,67 m

Ambient conditions

Ambient temperature	-20 °C ... +60 °C
Storage temperature	-40°C ... +80°C
Climate class	DIN/IEC 68 T2-30Db
Ingress protection	<ul style="list-style-type: none"> ■ with closed housing: IP 67, NEMA 6 ■ with open housing: IP 20, NEMA 1 ■ Sensor: IP 68
Vibration resistance	DIN IEC 68 T2-6 Tab. 2C (10 ... 55 Hz)
Electromagnetic compatibility (EMC)	<ul style="list-style-type: none"> ■ Interference emmission to EN 61326, Equipment class B ■ Interference immunity to EN 61326, Appendix A (Industrial) und NAMUR reccomendation NE 21 (EMC)

Process conditions

Process temperature -40°C ... +80°C

Process pressure 0,7 ... 3 bar abs.

Mechanical construction

Design / Dimensions

L00-FMUX3XXX-06-00-00-XX-002

Weight

Instrument	Weight
FMU 230	approx. 1,5 kg
FMU 231	approx. 1,6 kg

Housing material PBT glass reinforced / flame-retarded

Process connection

Instrument	Process connection	seal and sensor material
FMU 230	■ thread G 1½" ■ thread NPT 1½" - 11,5	PVDF / EPDM
FMU 231	■ thread 2" ■ thread NPT 2" - 11,5	PVDF / EPDM

Human interface

Operating elements

L00-FMUX3XXX-19-00-03-en-002

LED	Pressing of a key is confirmed by a flash of the green LED.
------------	---

Display module (optional)	When the display module is used, the Prosonic T is operated via an operating matrix. The current matrix position and the associated parameter (e.g. measured value) are displayed on the module. The bargraph represents the measured value or the echo quality, depending on the matrix position. The basic functions for simple applications (empty and full calibration, locking and unlocking) are accessible without the display module.
--------------------------------------	---

Certificates and Approvals

CE mark	The measuring system meets the legal requirements of the EC-guidelines and confirms the instrument passing the required tests by attaching the CE-mark.
----------------	---

External standards and guidelines	EN 60529 Protection class of housing (IP-code)
--	--

EN 61326	Electromagnetic compatibility (EMC requirements)
-----------------	--

NAMUR	Standards committee for measurement and control in the chemical industry
--------------	--
